

PIXi™

Image Scanning Tool

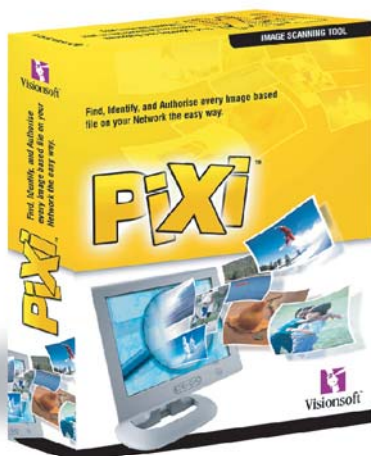

Find, Identify, and Authorise every image based file on your Network...the easy way!

Everybody knows that one of the downsides of modern PC accessibility and easy, fast access to the Internet is that of pornography and inappropriate material.

Offensive images lurk almost anywhere, by accident and on purpose and it's the responsibility of any sensible organisation or body to protect their users from this type of material.

Taking steps to ensure your corporate or school network isn't harbouring offensive material reduces employee litigation and saves embarrassment, potential legal investigations and of course hard disk space!

In many cases, web sites put images on your PCs without you even knowing so it's virtually impossible to be aware of exactly what images have found their way in.

Sadly, many people prepared to break the law actively search for open places to harbour their illicit material and there have been some high profile cases recently where such a place has turned out to be the corporate network, to the severe embarrassment of the companies and schools concerned.

So how do you check your PCs for image based material?

Obviously, by hand such a task would take years, and that's if you knew which files were images, where they were and you had an appropriate tool to display all image types.

With PiXi™, it just got a whole lot easier.

Run PiXi™ on your network and it identifies all connected computers. You can then select any computer for investigation and you get a complete directory listing of all images on that PC. You can then view them hundreds at a time, magnifying them for more investigation if required.

Once you're happy with the content, simply authorise the images existence so next time you review that PC you won't have to see them again. Alternatively, if you're not happy, delete them from the comfort of your desk.

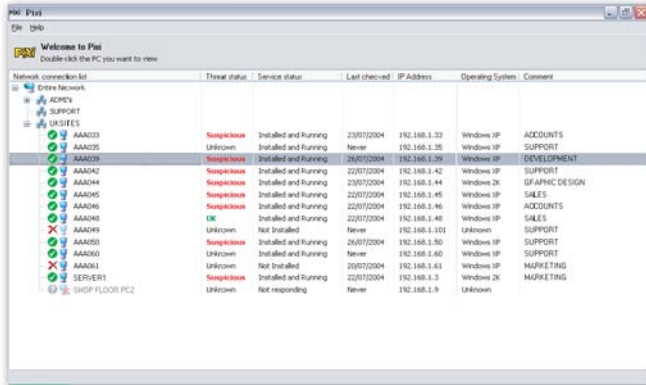

Protect your organisation today with PiXi™!

PIXi™

Features

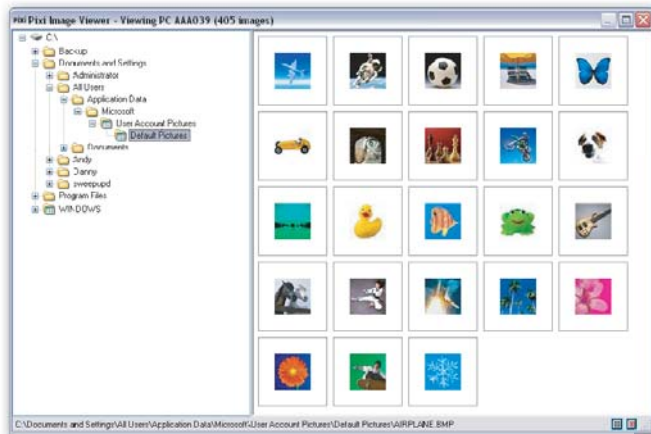

PiXi™ is a must for any organisation with PCs:-

- Easy to install
- Simple to use
- Fast effective picture audit software
- Authorise images
- Delete images
